PRESENTATION

DECLARATION OF INTENT

This document sets out the operational framework of a private investment structure focused exclusively on projects with genuine development capacity, execution potential, and structured return opportunities.

Access to project analysis, structuring, or participation is neither open nor automatic. Each opportunity is subject to a prior technical, operational, and financial assessment before any investment consideration is made.

NATURE OF THE GROUP

We operate as a private investment group, not as a financing platform or financial intermediary.

Our activity is focused on structuring transactions in which we may participate directly through investment, co-investment, or tailored financing solutions.

SECTOR FOCUS

Our investment approach is centered on projects with real execution capacity within strategic sectors, including:

- Hospitality
- Real Estate
- Energy
- Infrastructure

Speculative models or proposals lacking a clearly defined operational structure are not considered.

INVESTMENT PHILOSOPHY

Our primary criterion is not the volume of transactions, but rather the quality, consistency, and viability of each project.

Investment is understood as a structured process involving analysis, strategic support, and progressive execution.

PURPOSE AND INVESTMENT CRITERIA

The purpose of this framework is to establish a clear methodology for the identification, evaluation, and structuring of investment opportunities.

Key assessment criteria include:

- Technical, operational, and financial feasibility
- Demonstrated project execution capacity
- Defined or scalable management structure
- Clearly established investment horizon
- Sustainable value creation
- Alignment between capital requirements and expected returns

The group's activity is based on the active selection of opportunities with genuine execution potential rather than speculative models.

INVESTMENT STRUCTURING

When the project requires it, the investment may be carried out through participation structures adapted to the nature of the operation, with the objective of facilitating its execution.
These structures shall be defined on a case-by-case basis depending on the project's viability and the operational framework of the investment.

The group participates exclusively as a direct investor, contributing proprietary capital to transactions that have been previously analysed and validated.

Participation may take different forms, including:

• Direct co-investment
• Equity participation
• Participating loans where applicable
• Hybrid investment structures adapted to the project
• Phased or milestone-based execution

Each operation is structured individually according to its nature and the project execution plan.

In certain operations, support mechanisms linked to the specific nature of the project may be considered, with the objective of facilitating its execution.

These structures are defined on a case-by-case basis and may include support mechanisms associated with the operational execution of the project when necessary for its viability.

The final structure always depends on the technical, regulatory, and operational viability of the project.

WORKING FRAMEWORK

The process is carried out in two stages:

PHASE I – PRELIMINARY REVIEW & VALIDATION

- Submission of the LOI (Letter of Intent)
- Execution of NDA / Confidentiality Agreement
- Delivery of project and corporate documentation
- Preliminary technical and financial assessment
- Initial feasibility and risk evaluation
- Issuance of a preliminary structuring proposal

PHASE II – STRUCTURING & EXECUTION

- Acceptance of indicative terms and general conditions
- Activation of the structuring phase through operational provisioning
- Execution of Memorandum of Understanding (MOU)
- Definition and implementation of the investment structure
- Progressive deployment through agreed milestones
- Ongoing monitoring, coordination and execution oversight

Access to Phase II is strictly subject to the successful validation of Phase I.

OPERATIONAL IMPLEMENTATION FRAMEWORK

Each transaction is subject to a prior internal review and preliminary validation process before entering any implementation or structuring phase.

Once a project has successfully passed the preliminary assessment stage and has been accepted for further review, the transaction may proceed to an operational implementation phase involving the allocation of internal technical, legal, financial and administrative resources, as well as coordination with external advisors, institutions or counterparties where required.

Depending on the nature, scale and complexity of the transaction, certain implementation phases may require specific operational, technical or administrative arrangements associated with the structuring and execution process.

These arrangements shall be defined on a case-by-case basis according to the specific characteristics and operational requirements of each project.

The final implementation and structure of any transaction remain subject to applicable technical, regulatory, compliance and institutional validation requirements.

Acceptance of a project for implementation purposes does not constitute a guarantee of final funding, transaction closing or approval by third parties, all of which remain subject to independent review and final validation procedures.

EXECUTION MODEL

Investments may be deployed progressively through predefined phases, milestones or execution tranches.

Each tranche shall be linked to the verified progress of the project, ensuring disciplined capital allocation and appropriate alignment between funding deployment and operational execution.

PROJECT OVERSIGHT & COORDINATION

Project supervision may include:

- Monitoring of phased execution
- Verification of operational milestones
- Financial and strategic coordination
- Ongoing review of project progress and implementation

IMPACT & STRATEGIC VALUE

The group places particular emphasis on projects capable of generating long-term strategic value beyond purely financial returns.

Special consideration is given to initiatives contributing to:

- Employment generation
- Regional economic development
- Regeneration of underdeveloped or distressed areas
- Environmental sustainability
- Long-term social and structural impact

Investment is understood not only as a financial activity, but as a strategic instrument for economic growth, territorial development and sustainable value creation.

LIMITATION OF LIABILITY

All transactions and structuring activities are undertaken on the basis of a prior review, preliminary assessment and validation process, relying on the information, representations and documentation provided by the project sponsor, promoter or applicant entity.

The activation of the structuring phase shall not, under any circumstances, constitute a commitment or guarantee regarding the final execution, closing or funding of the transaction, as all operations remain subject to the technical, operational, financial, legal, regulatory and compliance approval processes of the institutions and counterparties involved.

The execution, implementation or completion of any transaction may be affected, delayed or prevented by circumstances beyond the control of the investment structure or participating parties, including but not limited to:

- Market conditions and liquidity constraints
- Regulatory or compliance requirements
- Internal approval procedures of financial institutions or counterparties
- Third-party authorisations or dependencies
- Political, economic or force majeure events

Accordingly, no guarantee is provided with respect to:

- Definitive execution or closing timelines
- Final approval by financial institutions or counterparties
- Acceptance or implementation of proposed structures by third parties
- Availability of financing under initially contemplated terms

Participation in the structuring process and/or activation of Phase II shall constitute full acceptance of this operational framework, including its conditions, limitations and inherent transactional risks.

PROJECT-SPECIFIC ANNEXES

Each transaction shall be governed by a dedicated project annex containing the specific operational and financial parameters applicable to the relevant transaction, including:

- Project overview and strategic rationale
- Proposed investment and transaction structure
- Capital allocation, amounts and execution phases
- Indicative implementation timetable
- Operational and financial milestones
- Commercial and economic terms
- Governance, control and supervision framework
- Exit strategy and divestment mechanisms

Investments may be deployed progressively through predefined phases, milestones or execution tranches.

Each phase shall remain linked to the verified operational progress of the project, ensuring disciplined capital deployment, appropriate risk management and alignment between investment allocation and project execution.

INFORMATION NOTICE

This document is provided solely for informational and descriptive purposes regarding the general operating framework of the investment structure. It does not constitute a public offering of investment, a solicitation of savings or deposits, nor any binding commitment to provide financing or execute transactions.
